24 October, 5-minute data

Daily totals, 1–24 October

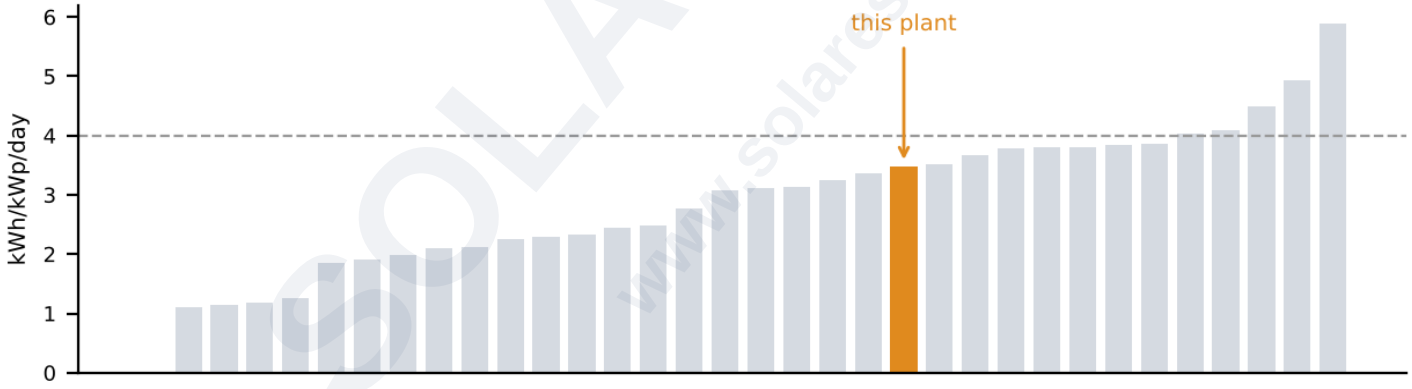

What we found

- Data missing for hours (e.g. 09:15–15:30 on 24 Oct, and 11 Oct) – the datalogger drops out.
- No battery; 163 kWh exported unpaid.

What to do

- Check the WiFi signal at the datalogger; move the router or add a repeater.
- Set export limit to 0 W, or add a battery to use the surplus in the evening.

How this plant compares with the other SolisCloud plants (kWh per kWp per day, 1–24 Oct)

Rank 13 of 34 for yield per kWp. Dashed line ≈ 4.0, a typical clear month in the north and centre. A low yield is not always a fault – a full battery or little daytime load makes the inverter throttle the panels.

This plant report is part of the October 2026 SolisCloud fleet review on www.solaress.org (Technical → Monthly Report), which also lists the recommended standard settings. Figures are estimates from monitoring data; site name removed.
