kWh solar	kWh/kWp/day	solar share of use	kWh/day bought	kWh exported	kWh/day from battery

24 October, 5-minute data

Daily totals, 1–24 October

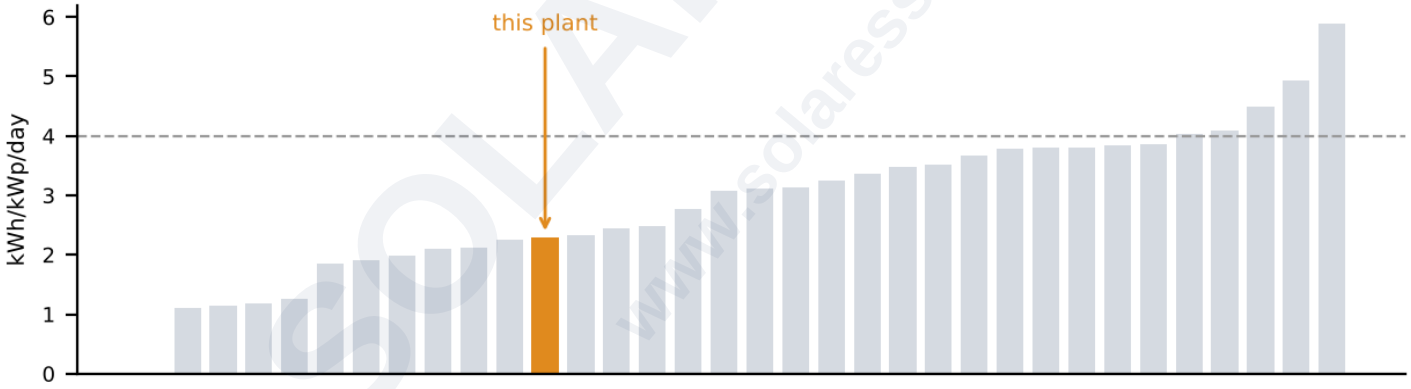

What we found

• Battery charges at a flat 2.2 kW for three hours, so the inverter holds the panels at 5–6 kW from 14.2 kWp.
• Battery only full at 14:50; yield 2.3 kWh/kWp/day.

What to do

• Raise the battery charge current limit (e.g. 50 → 100 A, within the BMS limit) so the battery fills earlier from solar.
• Expected: 4–6 kWh/day more solar used.

How this plant compares with the other SolisCloud plants (kWh per kWp per day, 1–24 Oct)

Rank 23 of 34 for yield per kWp. Dashed line ≈ 4.0, a typical clear month in the north and centre. A low yield is not always a fault – a full battery or little daytime load makes the inverter throttle the panels.

This plant report is part of the October 2026 SolisCloud fleet review on www.solaress.org (Technical → Monthly Report), which also lists the recommended standard settings. Figures are estimates from monitoring data; site name removed.
