kWh solar	kWh/kWp/day	solar share of use	kWh/day bought	kWh exported	kWh/day from battery

24 October, 5-minute data

Daily totals, 1–24 October

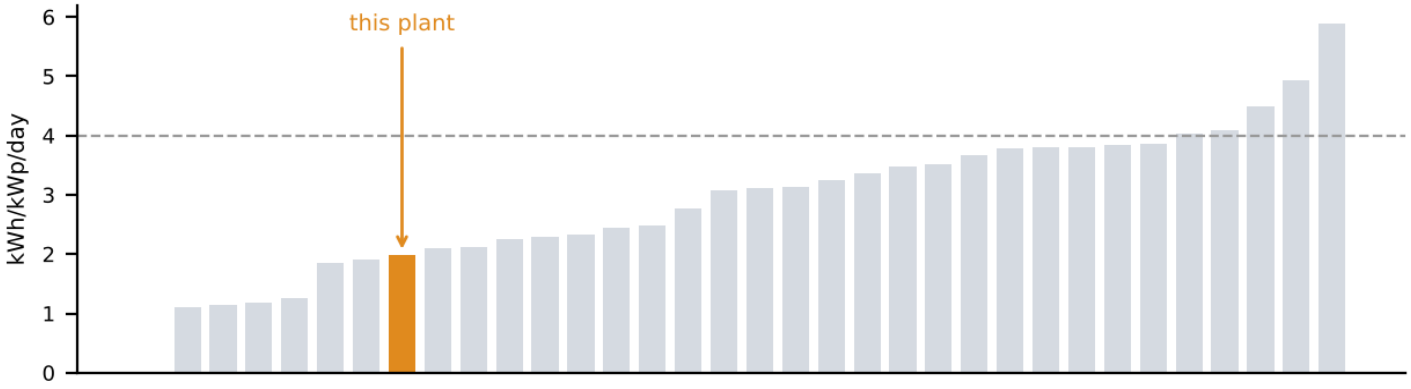

What we found

- Battery never goes below 50% – about half of it is never used.
- Sells 223 kWh to the grid while buying 251 kWh (unpaid export).
- Battery full by noon, then solar is throttled; 29 alarms.

What to do

- Lower battery low/overdischarge SOC to 20%.
- Set export limit to 0 W (Solar Sell off) unless the owner has a sell-back contract.
- Expected: 6–9 kWh/day less grid.

How this plant compares with the other SolisCloud plants (kWh per kWp per day, 1–24 Oct)

Rank 27 of 34 for yield per kWp. Dashed line ≈ 4.0, a typical clear month in the north and centre. A low yield is not always a fault – a full battery or little daytime load makes the inverter throttle the panels.

This plant report is part of the October 2026 SolisCloud fleet review on www.solaress.org (Technical → Monthly Report), which also lists the recommended standard settings. Figures are estimates from monitoring data; site name removed.
