24 October, 5-minute data

Daily totals, 1–24 October

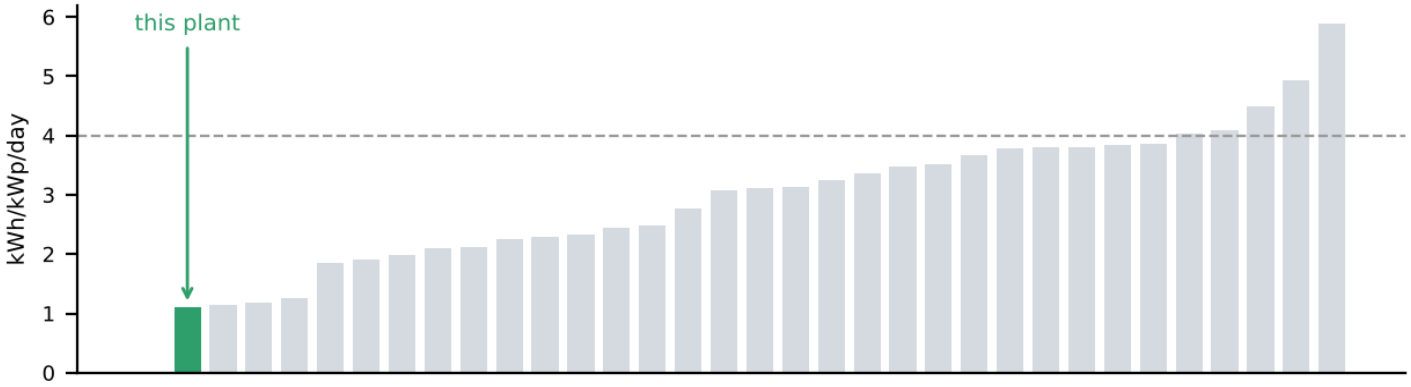

What we found

• Off-grid: all load (≈4 kWh/day) on the backup port; battery full by 14:30.
• Low yield (1.1 kWh/kWp/day) only because there is little to power.

What to do

• No action; extra daytime loads can be added freely.

How this plant compares with the other SolisCloud plants (kWh per kWp per day, 1–24 Oct)

Rank 33 of 34 for yield per kWp. Dashed line ≈ 4.0, a typical clear month in the north and centre. A low yield is not always a fault – a full battery or little daytime load makes the inverter throttle the panels.

This plant report is part of the October 2026 SolisCloud fleet review on www.solaress.org (Technical → Monthly Report), which also lists the recommended standard settings. Figures are estimates from monitoring data; site name removed.
