Which 650–670 W solar panel should I choose?

Six Tier-1 brands scored with stars, backed by independent tests and real field results

AIKO · LONGi · Jinko · Tongwei · Trina · JA Solar

1 Quick pick

BEST FOR HOME & SHOP ROOFS

LONGi Hi-MO X10

or AIKO Comet 3N72 · back contact

- Loses far less power when partly shaded
- More kWh from the same roof
- Lightest panels (28.5–29 kg)
- 15-year product warranty

BEST FOR CARPORTS & GROUND MOUNTS

Jinko Tiger Neo 3.0

or Tongwei TNC 2.0 · bifacial TOPCon

- Rear side adds output (85–88%)
- Tough dual-glass build
- Top independent reliability results

SAFE ALL-ROUNDERS

Trina · JA Solar

Tier 1 · TOPCon

- Solid, widely used brands
- Passed fewer top-level tests in 2026 (5–6)
- Fine for open, unshaded sites

2 Scorecard

Brand / model	Efficiency	Shade handling	Heat & roof weight	Proven reliability	Warranty	Rear-side gain	Roof score	Open-site score
AIKO Comet 3N72 (ABC)	★★★★★	★★★★★	★★★★½	★★★★½	★★★★½	★☆☆☆☆	4.7	3.9
LONGi Hi-MO X10 (HPBC 2.0)	★★★★½	★★★★½	★★★★★	★★★★½	★★★★½	★☆☆☆☆	4.6	3.9
Jinko Tiger Neo 3.0 (TOPCon)	★★★★½	★★★☆☆	★★★★☆	★★★★★	★★★★☆	★★★★½	4.1	4.4
Tongwei TNC 2.0 (TOPCon)	★★★★½	★★★☆☆	★★★★☆	★★★★★	★★★½☆	★★★★★	4.0	4.4
Trina Vertex N (i-TOPCon)	★★★★☆	★★★☆☆	★★★½☆	★★★★☆	★★★★☆	★★★★½	3.7	4.0
JA Solar DeepBlue 5.0 (TOPCon)	★★★★☆	★★★☆☆	★★★★☆	★★★½☆	★★★½☆	★★★★½	3.6	3.9

Solar ESS assessment, 5 = best. Roof score = efficiency, shade, heat & weight, reliability, warranty. Open-site score swaps shade handling for rear-side gain. Reliability is based on Kiwa PVEL 2026 and RETC 2026 independent tests.

3 What independent testers say

🏅 Kiwa PVEL 2026: Top Performer tests passed

AIKO	7–8 tests
LONGi	7–8 tests
Jinko	7–8 tests
Tongwei	7–8 tests
Trina	6 tests
JA Solar	5 tests

87% of all manufacturers had at least one failure in 2026, so brand choice matters. All six brands are also on the BNEF Tier 1 list (Q3 2026).

🏆 RETC 2026 "Overall Highest Achiever"

Jinko	7th year in a row
Tongwei	2026 winner

🔬 TÜV studies: back contact vs TOPCon

One shaded cell: back contact loses **12.9%**, TOPCon loses **33.9%** (TÜV NORD).
Same roof area: back contact makes **+4.11%** more energy and runs 0.5 °C cooler (TÜV Rheinland).

4 Real field results

☀️ Back contact beat TOPCon

AIKO · tree shading (China)	+12.04%
AIKO · partial shading (China)	+9.55%
LONGi · Seville, Spain (Enertis Applus+)	+3.4%
LONGi · desert (China)	+2.45%
AIKO · Japan, no shade	+2.6%
LONGi · France/Denmark (IPVF)	+1.84%
LONGi · hot & humid Sanya (CGC)	+1.54%

Yield gain per kW. Biggest gains under shade.

🌥️ TOPCon beat back contact

Trina · Kagoshima, Japan (TÜV Nord cert.)	+8.82%
Trina · low light, China (CPVT)	+4.38%
Jinko · rooftop, China (own data)	+1.7%

TOPCon tends to win in low light, cold or open sites. Each maker wins its own tests, so trust independent results first.

🇹🇭 **In Thailand:** a 974 kW LONGi Hi-MO X10 rooftop has run in Samut Sakhon since April 2025. Thai rooftops are hot and often partly shaded by trees, air-con units and nearby buildings, which is where back-contact panels gain the most.

5 Key specifications

Item	AIKO Comet 3N72 (ABC)	LONGi Hi-MO X10 (HPBC 2.0)	Jinko Tiger Neo 3.0 (TOPCon)	Tongwei TNC 2.0 (TOPCon)	Trina Vertex N (i-TOPCon)	JA Solar DeepBlue 5.0 (TOPCon)
Power	655–680 W	650–670 W	≤ 670 W	≤ 670 W	650–670 W*	≤ 650 W
Efficiency	up to 25.2%	≈ 24.2–24.8%	24.1–24.8%	up to 24.8%	≈ 24%*	24.07%
Heat loss	–0.26%/°C	–0.26%/°C	–0.26%/°C	n/c	–0.26%/°C*	–0.26%/°C
Glass	single	single	dual	dual	dual	dual
Weight	≈ 29 kg	28.5 kg	32.5 kg	32.5 kg	heavier*	n/c
Rear-side gain	no	no	85%	up to 88%	85%	85%
Size	2382×1134	2382×1134	2382×1134	2382×1134	—	n/c
Warranty (product / power)	15 / 30 yrs	15 / 30 yrs	12 / 30 yrs	n/c	12 / 30 yrs	n/c

n/c = not confirmed. * Trina 650–670 W figures not confirmed from a current datasheet; dual-glass Trina panels are heavier. All six have similar heat loss (about –0.26%/°C), so none has a real edge on hot days.

6 Choose in 30 seconds

🌳 Any shade on the roof?

Trees, air-con units, chimneys, nearby buildings, dust on edges.

Yes → AIKO or LONGi

📐 Small roof or light metal sheet?

You need the most power per square metre and the lightest panel.

Yes → LONGi Hi-MO X10

🚗 Raised carport or ground mount?

Light reflects onto the back of the panel from the ground.

Yes → Jinko or Tongwei

7 Good to know

- **All six are Tier 1** and Kiwa PVEL 2026 Top Performers. You are choosing between good options.
- **Back-contact panels are not smaller.** They are the same size (2382 × 1134 mm); they are lighter because they use single glass.
- **Bifacial panels on a roof** gain little, because the roof blocks light from reaching the back.
- **Workmanship matters as much as the brand:** correct cables, connectors, breakers and earthing protect your warranty.
