CUSTOMER GUIDE · WARRANTY

Solar ESS Installation Coverage

Every Solar ESS system is protected in three layers: the makers of the equipment cover the products and their power output, and Solar ESS covers the installation work. This page explains who covers what, for how long, and what is not covered.

1 · Equipment
Defects in panels, inverters, batteries and mounting
Manufacturer

2 · Performance
Minimum power output from the panels over 25–30 years
Manufacturer

3 · Workmanship & maintenance
Installation quality, maintenance and service visits: 5 years
Solar ESS

Scope: the solar system only. This coverage applies only to the solar system Solar ESS supplied and installed: panels, mounting, DC and AC solar equipment, inverter and battery, up to the point where it connects to the building. Solar ESS is happy to give advice on the rest of the building's electrical system, but problems there should be solved by the electrician or contractor directly responsible for that workmanship.

1 · Equipment warranty (manufacturer)

Solar panels
10 years
Material or manufacturing defects: cracks, glass delamination, junction box failures.

Inverters
10 years
Internal electronic or mechanical failure. Microinverters and optimisers: up to 25 years.

Batteries
10 years
Defects and capacity retention, or a set number of charge cycles, whichever comes first.

Mounting
10–25 years
Rails and fixings against corrosion and physical defects.

The exact period is the one on each maker's warranty certificate for the model installed, which Solar ESS hands over at completion.

2 · Performance warranty (manufacturer)

The panel maker guarantees that the panels will still produce a minimum share of their rated power, usually **80–85% after 25–30 years**, following a straight-line (linear) degradation schedule. If a panel falls below that line, the maker repairs, replaces or compensates it under its own terms.

Good to know

- Warranty periods start on the handover date written in your completion documents.
- The cover in your signed contract or quotation takes priority over this general guide.
- Extended service plans can add labour and travel cover after the 5-year workmanship & maintenance period.
- Insurance for natural disasters is arranged by the building owner; we can supply system details for the insurer.

3 · Workmanship & maintenance warranty (Solar ESS) · 5 years

Installation quality

Loose wiring, poor MC4 crimping, faulty conduit routing and inverter set-up errors. Standard cover: **5 years** from handover.

Maintenance & service visits

Scheduled maintenance for **5 years**, and a technician on site within 48 hours of a reported fault to diagnose it and swap failed parts.

What is not covered

Natural disasters and extreme weather
Lightning, hail, storms, floods or falling trees. These belong under the building's property insurance.

Normal wear and tear
Expected ageing of components within the limits the manufacturer guarantees.

Neglect or lack of maintenance
Faults caused by heavy debris or dirt build-up, or by skipping scheduled check-ups.

Unauthorised or DIY work
Repairs, relocations or additions by anyone other than Solar ESS or an approved technician.

Labour and shipping outside the terms
Makers usually replace the faulty part only. Labour to remove and refit it, and shipping, are covered only during the 5-year Solar ESS workmanship & maintenance warranty or under a service contract.

Anything outside the solar system
The building's own wiring and equipment, grid problems, pests or accidental damage. We can advise; the party responsible for that work should fix it.

How to make a claim

1. **Tell us**
Call 063 151 6694 or 089 632 5829, or LINE solaress1, with the site name and what you see.

2. **Send evidence**
Photos of the fault and the inverter screen, or a screenshot of the monitoring app.

3. **We diagnose**
We check remotely first, then send a technician within 48 hours if needed.

4. **We fix or claim**
We repair workmanship faults ourselves and handle manufacturer claims with our supplier for you.

Your part in keeping the cover valid

- Keep the inverter online so the monitoring app can show faults early.
- Clean panels when dust or leaves build up, or book our cleaning service.
- Book the scheduled check-ups in your maintenance plan.
- Do not open the inverter, battery or DC boxes, and do not move or add equipment yourself.
- Keep the handover documents and warranty certificates.
- Tell us about renovations or changes to the building's wiring before they start.

In short: the manufacturer covers the product and its output; Solar ESS covers workmanship and maintenance for 5 years and comes to site within 48 hours. Keep the system maintained and unmodified, and the cover stays in place.
