Solar ESS product sheet · October 2026

Automatic transfer switch (ATS)

An ATS rated for the full load, chosen per project

Used where a site has backup power, a generator or more than one supply.

> **The ATS is a safety device as much as a convenience. We size it to the site, not to a price list.**

What we fit

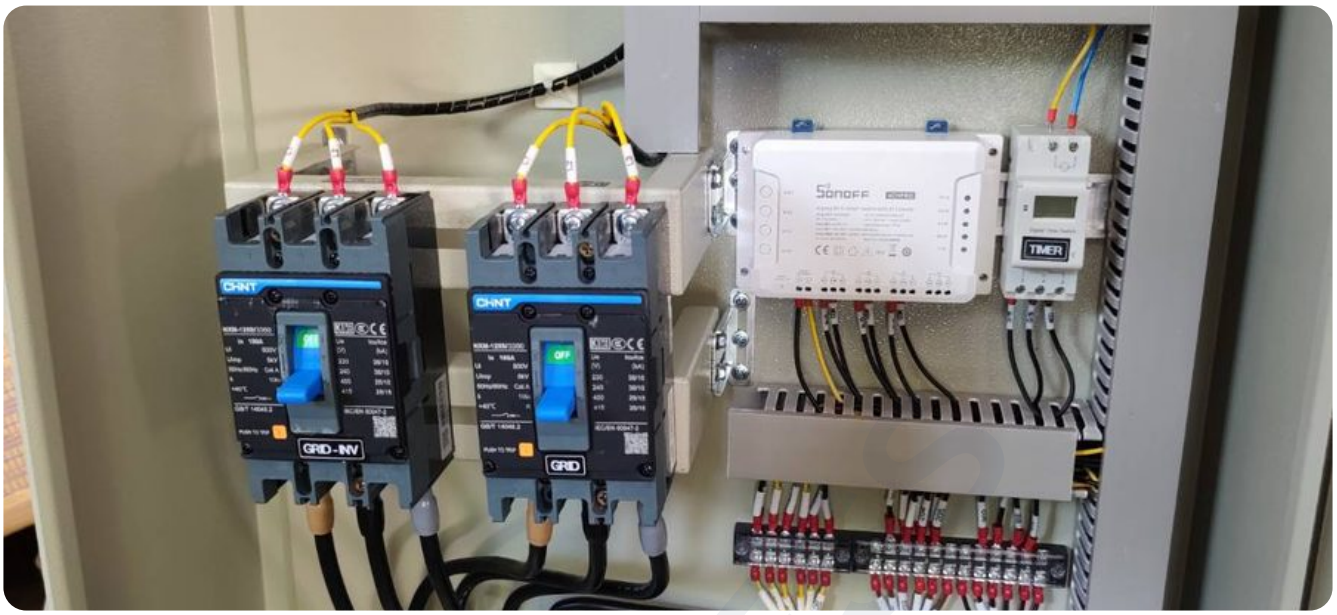

ATS	GEYA, CSQ, SUNTREE

Why we pick it

- Switches the load between sources by itself, so the lights come back without anyone going to the board.
- Breaks one source before making the other, so solar or generator power can never feed back into the grid line.
- Rated for the full current of the circuits it carries, with margin, not for the average load.
- Laid out with a manual bypass so the site can still be run by hand during service.

GEYA 4-pole ATS with its own controller, mounted in the changeover board

Changeover board: CHINT MCCBs, ATS and labelled terminals

For prices and a design for your site, book a consultation at www.solaress.org or LINE: solaress1. All qualifications and certificates will be furnished upon request or upon completion of contract.
