Solar ESS product sheet · October 2026

Cable and fuses

# Yazaki copper on the AC side, solar-rated cable on the DC side

Copper throughout, sized to keep losses low.

> **Cable is hidden once the job is finished, which is exactly why it is the first place cheap installations cut.**

## What we fit

| | |
|---|---|
| **AC cable** | Yazaki, copper |
| **DC cable** | LINK, Phelps Dodge, HELUKABEL |
| **DC fuses** | SUNTREE |

## Why we pick it

- Solar-rated DC cable is double insulated and built for years of sun, heat and rain on a roof.
- We size cable by the length of the run, not by the minimum that will pass, so less of your solar power is lost as heat.
- Fuses on the DC strings protect the cable and panels if one string develops a fault.
- Run in conduit and wireway, clipped and labelled, with nothing left loose on the roof.

## AC cable

Yazaki copper from the inverter to the main board, sized for the inverter's full output and the length of the run.

- We keep the voltage drop small. A long, thin AC cable raises the voltage at the inverter, which can make it trip off on high grid voltage.
- Run in conduit or wireway and labelled at both ends.

## DC cable

Solar-rated, double-insulated copper cable (LINK, Phelps Dodge, HELUKABEL) from the panels to the inverter.

- Built for UV, heat and rain on a roof for the life of the system.
- Positive and negative are run together and kept short to reduce losses and surge pickup.

Yazaki THW copper cable, IEC 01, 450/750 V

Yazaki THW in phase colours for the AC side
