Solar ESS product sheet · October 2026

Grounding system

One earth, measured and recorded

Panel frames, rails, boxes and the inverter all bonded to a tested earth.

> **Surge protection and leakage protection only work if the earth behind them is real.**

What we fit

Earth rods	Copper-bonded ground rods
Earth conductor	Green/yellow copper, sized to the circuit
Bonding	Every panel frame, rail joint and metal box

Why we pick it

- Bonding the frames and rails means a fault cannot leave exposed metal live.
- Surge protection drains a lightning surge to earth through a short, direct path.
- Earth resistance is measured at commissioning and recorded, with a target of 5 ohms or less.
- The solar earth is joined to the building's main earth so there is no difference in potential between them.

For prices and a design for your site, book a consultation at www.solaress.org or LINE: solaress1. All qualifications and certificates will be furnished upon request or upon completion of contract.
