Sensors

# Current transformers and monitoring sensors

The small parts that tell the system, and us, what is really happening.

> **One CT clipped the wrong way round can make a good system look broken.**

## What we fit

| | |
|---|---|
| **Current sensors (CT)** | The inverter maker's own CTs, sized to the main breaker |
| **Monitoring sensors** | Irradiance and panel-temperature sensors on larger plants, on request |

## Why we pick it

- Each CT goes on the right conductor, facing the right way, on its matching phase.
- Split-core CTs let us fit them to an existing board without cutting the supply.
- Irradiance and temperature readings let us judge output against the weather, for example before deciding whether panels need cleaning.
- Readings are logged in the monitoring app, with alarms when something drifts.

For prices and a design for your site, book a consultation at www.solaress.org or LINE: solaress1. All qualifications and certificates will be furnished upon request or upon completion of contract.
