Battery too small for evenings

10 kWp · 10 kW 1-phase hybrid inverter · battery

739	3.08	54%	24.7	0	12.0
kWh solar	kWh/kWp/day	solar share of use	kWh/day bought	kWh exported	kWh/day from battery

24 October, 5-minute data

Daily totals, 1–24 October

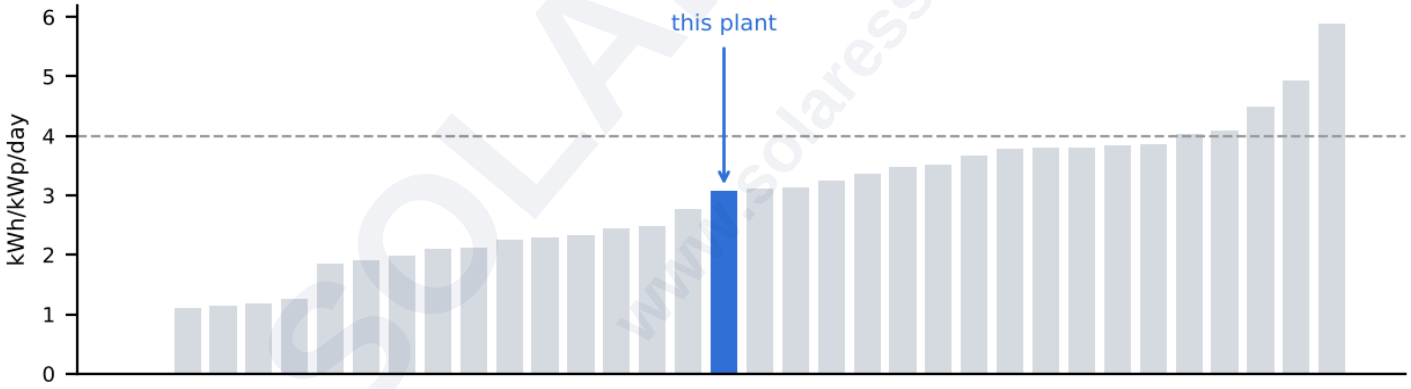

What we found

- Battery reaches its 10% floor by about 21:30; evening load 9–10 kW then comes from the grid (25 kWh/day bought).
- Battery low SOC set to 10% – very deep for daily cycling.

What to do

- Add 10–15 kWh of battery.
- Raise the battery low SOC to 15–20% to protect battery life.

How this plant compares with the other SolisCloud plants (kWh per kWp per day, 1–24 Oct)

Rank 18 of 34 for yield per kWp. Dashed line ≈ 4.0, a typical clear month in the north and centre. A low yield is not always a fault – a full battery or little daytime load makes the inverter throttle the panels.

This plant report is part of the October 2026 SolisCloud fleet review on www.solaress.org (Technical → Monthly Report), which also lists the recommended standard settings. Figures are estimates from monitoring data; site name removed.
